Korrespondensie: Afrikaans of Engels.

#### MARICO NURSERIES,

Proprietor: F. H. WAGNER.

# NURSERYMEN, SEED AND PLANT MERCHANTS.

P.O. Box 15, Groot Marico, Transvaal.

Bankers: Netherlands Bank, Johannesburg Branch.

To our Friends and Patrons,

It is with great pleasure that we present this our General Catalogue for the 1934-35 Season, more so as we are able to do so during such favourable climatic conditions.

With renewed interest all Agriculturists and Horticulturists, whether amateur or commercial, can look forward to the approaching season. By the copious rains that have fallen all over the country, the water supply for the near future has been ensured, and a splendid opportunity is given to those desirous of replacing what was a toll of the drought, or the laying out of new Gardens, etc.

The commodities offered are of the very highest quality and clients can be assured of our most prompt and careful attention at all times.

In conclusion we take this opportunity of thanking our Patrons for their esteemed support in the past. also for kind recommendations to friends, with the assurance that their renewed confidence will be much appreciated.

Yours faithfully,

MARICO NURSERIES,
F. H. Wagner, Proprietor.

# Order Form for Fruit Trees. - Bestelvorm vir Vrugtebome.

Conditions of Sale.—It is expressly agreed that should any goods sold by us prove untrue to name and label, we undertake either to replace such individual articles or refund the price paid therefor, and that no other or further liability for loss or damage directly or indirectly will rest on us. Only on these conditions are orders accepted.

Kondiesie van Verkoop.—Indien goedere deur ons gelewer nie met die beskrywing ooreenkom nie, dan is ons slegs verantwoordelik om hierdie goedere deur die regte soort te vervang of die geld daarvoor ontvang terug te betaal. Vir verdere verlies of skade, direk of indirek, sal ons geen verpligtings erken. Slegs op hierdie voorwaardes voer ons bestellings uit.

#### **BUSINESS NOTICES.**

The prices in this Catalogue are subject to revision without notice, and this Catalogue cancels all previous lists issued by us. We always presume that our customers, all of whom have our Catalogue, have perused our business notices and agree to the conditions of sale given therein.

Every order should give full forwarding instructions, if by rail or post, which station or post office. Please write clearly and distinct your name and address, and use enclosed order forms to facilitate despatch.

Packing.—All trees and plants are packed and dispatched under our personal supervision. A small charge is made to cover cost of the material and all packing is carried out in a thorough manner. Although in some cases we pay railage to the destination station or siding, we accept under no circumstances any responsibility as to safe delivery.

Remittance.—It is respectfully requested that all orders from unknown correspondents be accompanied with Remittance. Please do not cross Postal Orders without adding bank exchange.

Customers making their own selection from this catalogue are requested to give a few supplementary names, so that we may be able to complete the order, in case any of the first mentioned should be sold out. If no such list is given, we will give substitutes of the nearest varieties or size, unless advised not to do so.

Condition of Sale.—It is expressly agreed that should any goods sold by us prove untrue to name and label, we undertake either to replace such individual articles or refund the price paid therefor, and that no other or further liability for loss or damage, directly or indirectly, will rest on us. Only on these conditions are orders accepted.

Cancellation of booked orders will be accepted up to May 15th, after that date we reserve the right to accept cancellations. We further stipulate that in cases of orders booked for delivery at a later date we shall not recognise any liability in the event of failure to effect delivery on the date agreed upon, if such failure be caused by the trees failing to grow to standard size owing to adverse weather or other conditions beyond our control.

All goods are offered subject to being unsold on receipt of order.

#### FRUIT TREES.

We specialize in all leading old and new varieties, and our stocks comprise from 100,000 trees upwards in various stages of growth: Our Nursery is annually inspected by Government Officials, and Customers are assured of receiving clean trees.

Our trees, being grown in one of the driest climates of the Union, consequently progress favourably in any other part of South Africa. With a highly suitable soil, and frequent transplantings of the young stocks, we are able to raise trees with a most perfect root system, thus reducing the risk in transplanting considerably. We cater for the small plotholders, as well as the large commercial planter, and we are always pleased to give advice, and to submit special quotations for large quantities of trees.

Mazabuka, Northern Rhodesia, 17-5-'33.

I am very pleased with all the Fruit Trees I have had from you last year and the year before. I have had excellent Apples, Peaches and Grapefruit this season. Your Vegetable and Flower Seeds are the best I have had in South Africa.

#### COLLECTION OF FRUIT TREES.

We often receive letters from Plotholders desirous of planting fruit trees to supply their household requirements. As the majoriy of clients are not conversant with the different varieties, we have decided to offer the following collection of trees and will select carefully in each case trees suitable for the particular climate and varieties ripening consecutively, so as to ensure an evenly distributed supply of fruit over a long period.

This Collection consists of 12 trees comprising the following: 1 each Almond, Apple, Pear, Apricot, Nectarine, Quince, Peach, Vine and 2 each of Plums and Figs. For the Citrus Belt an Orange and Lemon can be substituted in place of Fig and Plum.

Price per Collection from Open Ground for Winter Planting: Delivered railage paid or post free. Extra sized trees, 25/-; First sized trees, 18/-; Second sized trees, 14/-.

Price per Collection of Trees in tins for summer planting: Free on rails Marico. Extra sized trees, 32/6; First sized trees, 27/6.

#### PRICES OF FRUIT TREES FROM OPEN GROUND.

5% can be deducted if Cash is sent with Order.

Railage or Postage prepaid on all orders of Fruit Trees per dozen, per hundred and by taking larger quantities. (Within the Union.)

(Except trees in tins.)

Special Quotations for large quantities.

# APPLES, PEACHES, NECTARINES, APRICOTS, ALMONDS, WALNUTS, PLUMS, QUINCES and FIGS.

			Each.	Per dozen.	Per 100.

CHERR	V and	PEAR TRI	ctes		
Extra size			2/6	25/-	£8-10-0
First size 2-	-3 yrs.	3-4 feet	2/-	22/-	£7-10-0
Second size 1	yr.	2 ft. 6 ins.	1/9	18/-	£6-5-0
	CITRU	S TREES.			
Extra size 21	yrs.	3-4 feet	2/6	25/-	£9-10-0
First size 1	1/2 yrs.	3 feet	2/-	22/-	£8-10-0
Second size	1 yr.	2 feet	1/9	18/-	£6-5-0

Figs and Quinces, large fruiting varieties for Hedges, can be supplied at £3 per hundred.

Our Fruit Trees are liberally graded, but Walnuts and Figs being more sturdy are not such vigorous growers, and while we pledge ourselves to supply these varieties of trees at the age mentioned in our foregoing price list, we are unable to adhere strictly to the heights stated above, and these trees will generally be found a little under the prescribed heights.

What Size Trees to select.—For home gardeners the extra size trees we offer is the most logical choice, because they give quickest results and come into bearing much sooner. Those contemplating a large acreage may be interested in smaller size trees, and if a list of your actual requirements is sent us, we will be pleased to submit our lowest quotations.

Planting Time of Deciduous Trees.—From open ground, June to beginning of September, except Chinese Peaches and Almonds, which should be planted before the 15th of August, as the sap rises earlier in these varieties. Apple Trees can be planted till end of September, but it is always advisable to plant as early in the season as possible, as a tree planted in June or July has time to develop fresh fibrous roots before it starts to grow.

Booking Orders.—Orders may be booked at any time of the year. We will then forward when advised, or at the proper season for planting. No extra charge is made. Our stock of Trees and Roses is increasing yearly, but owing to greatly increased demand for our Trees we expect to be sold out of several lines before the end of the season. Customers are therefore well advised to order early to avoid disappointment.

Vierfontein, 23-1-'34.

I may say that the Fruit Trees I got from you some years ago have, in spite of drought, given me some beautiful fruit this year. I am really very pleased.

# PRICES OF FRUIT TREES IN TINS.

Special Quotations for large quantities.

Available from October till March for Summer Planting.

CITRUS TREES, PEARS, CHERRIES and MULBERRIES.

Extra Size Trees: I 4 gallon tins, well established, with nice bushy heads, 3/6 each; 38/- per dozen; f.o.r. Marico.

First Size Trees: 3/- each; 33/- per dozen, f.o.r. Marico.

PEACHES, NECTARINES, ALMONDS, JAPANESE PLUMS, QUINCES, FIGS, APPLES, APRICOTS, WALNUTS.

Extra Size Trees: 3/- each; 33/- per dozen, f.o.r. Marico.

First Size Trees: 2/9 each; 29/- per dozen, f.o.r. Marico.

Planting Trees out of Tins should be much more generally practised, as it ensures an unfailing chance of growth, especially with Citrus Trees in districts which are subject to Winter Frosts. Trees planted out of tins do not need to be pruned back after planting. We stock a number of trees in different varieties established in tins, but customers requiring quantities established in tins are advised to book such orders two or three months ahead.

#### HINTS ON PLANTING TREES.

Care of Trees on Arrival.—If not ready to plant at once, deciduous trees can be kept in the following way, until a convenient time for planting arises. After unpacking the trees, dig a trench in a shady place and heel in by carefully covering the roots of the trees with soil, and giving a good watering immediately afterwards. Citrus trees cannot be treated in this way, and it should be at all times arranged to have Citrus trees railed when all preparations for planting have been completed.

Planting.—Should be carefully done, holes to be dug 3 x 3 feet, two feet deep, but the ground below that depth requires to be loosened for another foot. The roots of the trees must be examined and all bruised or broken portions cut off with a sharpe knife or shears. The trees are then planted,

the roots spread out in their natural direction, then soil thrown into the hole and well worked into the roots, after that a couple of buckets of water may be thrown in and when that has disappeared the hole can be filled in level with the surrounding land. The trees after planting should stand as high above the ground as they did in the nursery and in the case of Citrus trees 3 inches higher. Deep planting of trees is fatal.

Pruning of Fruit Trees after Planting.—Deciduous and Citrus Trees.—Cut the main shoot down to about knee height on single stemmed yearling trees. On older trees cut the centre shoot to about 3 or 4 feet and shorten the side shoots 6 to 12 inches from the main stem. Walnuts and Figs do not require any cutting. — Vines: The main shoot of vines must be cut back to about 3 inches from the main stem, or runner. Older and well branched Vines do not need to be cut quite so short.

Citrus Trees need shading after planting.—This is best done by tying dry grass round the stem of each tree, just allowing the top of the tree to project. This shading should be put on immediately after each tree has been planted, and left until the tree shows signs of sprouting, when it can be removed during a cloudy day. Citrus Trees planted out of tins do not need to be shaded or pruned.

#### PLANTERS' TABLE.

#### SHOWING NUMBER OF TREES REQUIRED PER ACRE.

Distance apart	Number of		Distanc	e apart	Number of
in feet.	Plants.		in	feet.	Plants.
30	48			18	134
28	55			16	169

24	.75			12	302
22	90			10	435
20	100	10		9	686

Distance to plant apart in feet: Apples and Pears, 24 x 24 feet; Peaches, Nectarines, Apricots and Plums, 20 x 20 feet; Almonds, 24 x 24 feet, for windbreaks, 18 x 18 feet; Cherries, 24 x 24 feet; Quinces and Figs, 16 x 16 feet; Walnuts, 30 x 30 feet; Citrus trees, 24 x 24 feet; Vines, 5 x 5 feet; Mangoes and Avocado Pears, 24 x 24 feet; Loquats and Mulberries, 24 x 24 feet. Quinces and Figs for hedging, plant 5 feet apart. For smaller house gardens the distances given can be reduced by a third.

#### Apples.

(For Prices see Pages 2-3.)

Plant 24 x 24 feet apart.

All Apple Trees offered by us are guaranteed double worked on blight proof stocks, and are budded ten to twelve inches above the ground.

Abbreviations: "C" Cooking; "D" Dessert Varieties.

- UTRECHT BEAUTY (D), a new introduction, a most profitable variety, a wonderful heavy cropper, fruit medium sized ,yellow, streaked red on sunny side. Tree of vigorous growth and an early bearer. Yearlings 2/6; larger size, 3/6 each.
- TAYLOR'S SEEDLING (D), a new apple, tasty and large. Colour bright pink when fully ripe. Tree is a very heavy bearer. Yearlings, 2/6 each.
- ALMA (D), Fruit medium size, nicely coloured, fine flavour; bears very young.

  December. Does well in warm climates.

- APPLE OF COMMERCE (D). A fine dessert apple of great beauty; fruit large, solid and of perfect shape; prolific, good keeper, late.
- BALLARAT SEEDLING, see Steward Seedling.
- **BLACK BEN DAVIS** (D). Beautiful, solid red colour, fine quality, good keeper, sure cropper, excellent shipper. March—April.
- CARTERS BLUE (D). Large sized fruit of pale green colour striped red. Strong grower and reliable bearer. Good for export. Late,
- CHRISTMAS (D). Also called "Lady" or "New Year Apple". Well coloured, middle sized, early fruit. Tree an abundant bearer. Ripe December—January.
- CLEOPATRA (D). A large yellow apple. Flesh tender and melting, a heavy and continuous cropper. March—May.
- **DELICIOUS** (D). A beautiful and delicious apple, of exquisite flavour; strong grower and most prolific; one of the best late keepers and export apples. Colour yellow with lively red stripes.
- **DUTCH TULIS** (D). Very early summer apple, colour deep red. Tree bears young, fruit middle sized oblong.
- EARLY HARVEST (D). Early, medium to large, pale yellow, early regular bearer, moderate grower. January.
- JONATHAN (D). Flesh white tender and juicy, aromatic. Fruit medium sized, yellow, deepening to brilliant red on the sunny side. Slender growth, free bearer. does well in the Highveld and Lowveld alike. Good exporter.
- KING OF TOMPKINS COUNTY (CD). Large, striped yellow and red, flesh juicy and of good flavour. Good grower. Good shiper. May—June.
- LONDON PIPPIN (CD). One of the very best apples for all purposes, medium to large, green tinged with red; late. March to August,
- LORD WOLSELEY (CD). Large green, heavy bearer, good cooking and dessert; nearly blightproof. April to August.
- MINISTER VON HAMMERSTEIN (D). Fruit large, yellowish splashed red.

  Tree free growing and exceptionally young and heavy bearer. March to
  August; excellent storer and shipper.
- MISSOURI PIPPIN (C). Large,, pale yellow, splashed red. April.
- NORTHERN SPY (D). Regular, good bearer; large greenish yellow, fine grained, crisp, sub-acid, blightproof. April to June.
- **OHENIMURI** (CD). Hardy grower, good bearer, fruit above medium size. Bright yellow, excellent keeper. April and later.
- REINETTE DU CANADA (D). Large and handsome, greenish yellow, shows well. Table and cooking. March to May. Suitable for the Bushveld,
- ROME BEAUTY (D). Winter dessert apple, late bloomer, fruit large, with carmine stripes. April to June. Suitable for warm climates.
- STEWARDS SEEDLING (D). Fine grower, early bearer. Fruit flattened, skin bright yellow, excellent keeping qualities. Stores well and a good shipper.
- VERSFELD'S (CD). Well known late apple. Large, red, of good quality. April to September, does well in warm climates.
- WEMMER'S HOEK or LATE BLOOMER (D). Hardy, prolific, medium dark red, well known, good keeper. Late. Good for warm climates.
- WAINWRIGHT (CD). Large, yellowish red, crimson striped on sunny side. Ripening February—April. Tree commences bearing exceptionally young.
- WILLIAM'S FAVOURITE (D). Australian apple of good size, ripens Mid-December. Can be recommended.

- WHITE WINTER COLVILLE (D). Large, piquant flavoured, excellent table fruit. The most expensive and sought after variety of the European fruit trade. Tree extraordinarily early and heavy bearer, imported by ourselves.
- WHITE WINTER PEARMAINE (D). Finest dessert apple in cultivation, large, yellowish rosy cheek, keeps well. June. Good in hot climates.

#### Pears. — D. Pere.

Plant 24 x 24 feet distance. — All trees worked on Wild Pear Stock. (For Prices see Pages 2-3.)

- BONCHRETIEN WILLIAMS. Very large, melting, good bearer. February to March, Fruit pyriform, green, changing to yellow when ripe, reddish on side next to the sun.
- BEURRE HARDY. Large handsome fruit, rich flavour. March.
- BEURRE BOSC. Large and of good quality, yellow splashed with russet, good keeper. Februar to March.
- BEURRE DE TONGRES. Highly coloured, heavy early bearer. March.
- CLAP'S FAVOURITE. Large pyriform vinous flavour. February to March.
- DOYENNE DE COMICE. Large, pyriform, skin yellow with patches of brown, delicious rich flavour. May.
- FERTILITY. Flesh half melting, juicy and sweet; medium sized fruit, bears young. March and later.
- FORELLE. Excellent pear, ships well, fruit medium sized, oblong; will store two months. Mid-season.
- GANSELS BERGAMOTTE. Fruit roundish, greenish yellow. Flesh white, buttery, of strong flavour. March—July. Excellent shipper.
- GLOU MORCHEAU. Flesh white, sweet and tender. Skin pale greenish yellow, strong musk flavour. March—July. Excellent shipper.
- JARGONELLE. Large, yellow and russet brown ,true pear shape, delicious, melting, very good. March.
- KEIFFER HYBRID. Large yellow, red cheek, buttery, firm, good keeper. March. Stores till September. Does well all over South Africa.
- LOUISE BONNE OF JERSEY, Yellow with red cheek, medium size, very juicy, excellent flavour. March.
- LE COMTE. Large yellow, fine grower, good cropper, used for cross-polonising Keiffer Hybrid. Late.
- PACKHAM'S TRIUMPH. One of the newer Australian sorts, very nicely shaped fruit, large and of very good quality, ripening mid-season to late. Vigorous growing tree, prolific, bearing heavily even on young trees.
- SWEET SUMMER SAFRAAN. An old colonial variety.
- VICAR OF WINKFIELD. Large pyriform, greenish yellow, tinted red on one side, good for stewing. April.

Vereeniging, 13-5-'32.

I had some lovely Tos China peaches off one of my trees, the flavour and size being excellent.

WINTER NELIS. Medium sized, round, yellow fruit, with russety spots, melting, vinous, very aromatic moderate grower and good bearer. Standard late variety. April to May.

WINTER SAFRAAN. Old well-known colonial variety, stores well, a general home garden utility pear.

#### Peaches. — D. Perskes.

Plant 20 x 20 feet distance, — Worked on Yellow Peach Stocks.

(For Prices see Pages 2-3.)

Export Varieties of Peaches, suitable for the Highveld, are:—

Earlies: Inkoos, Duke of York, Early Alexander, Mayflower, Le Vainquer,
Waterloo.

Lates: Dr. Hogg, Elberta.

# Freestone Peaches. — D. Lospit Perskes.

THREE NEW VARIETIES OF LATE FREESTONE PEACHES.

The undermentioned varieties we have imported from Italy, and same are very highly recommended in the country of origin. The name given by the raisers, "Tos China", may lead one to think that these are Chinese Peaches, but they are hybrid varieties, possessing the high bearing qualities of the Chinese strains together with the fine flavoured round fruit of the European and American varieties of peaches. All three kinds bear a profusion of fine well coloured fruit, measuring about three inches in diameter, with sweet and juicy flesh, completely free from the stone. They have proved themselves to bear abundantly in the Highveld as well as the Lowveld and can be recommended with confidence.

Pietersburg, 10-8-'33.

The Tos China Peach Trees I got from you two years ago agree very well to this climate. I had over a hundred Peaches from each tree measuring from 3" to  $3\frac{1}{4}$ " in diameter and 10" to  $10\frac{1}{2}$ " in circumference.

- TOS CHINA FEBRUARY. Flesh creamy white, large roundish fruit, turning red on the sunny side. Tree vigorous grower and early bearer, ripens end of February.
- TOS CHINA MARCH. This tree of slender growth is a most prolific bearer, carrying highly coloured fruit which ripens about 2—3 weeks later than the foregoing.
- TOS CHINA APRIL. One of the latest of all peaches, and certainly the most tasty of the late varieties. Its deliciously flavoured, fruit is of very large size and beautifully coloured. A special feature of this variety is that the fruit will store readily for longer than a week in an ordinary room, without losing its flavour or colour.

PRICES: Yearlings, 1/6 each; 15/6 per dozen; £5.5.0 per hundred.

Two-year olds, 2/- each; 20/- per dozen; £6 5s. per hundred.

Three-four-year olds, 2/6 each; 25/- per dozen; £7 10s. per 100.

TRIAL COLLECTIONS of three trees, one of each variety:—
Yearlings at 4/6; Two-year olds at 5/6; Three-year olds at 7/- per collection.

Pretoria, 17-5-'32.

Ek wil U nog dank bewys vir die Tos China Perskes, hulle het goed gedra en ook pragtige vrugte.

- APRIL. The name indicates time of ripening. Large, red, partial freestone. Flesh melting and juicy.
- BELLE BEAUCE. Large, deep red all over, flesh white juicy and rich, red at stone; mid-season.
- BRIGG'S RED MARY. Very early white, nearly covered with red blush; first quality. December. Good shipper. Partial free-stone.
- BROOKS. Yellow skinned, almost entirely covered with deep red blush, a Bushveld variety. Mid-season.
- CRIMSON GALANDE. Flesh tender and melting, stained red round the stone. Fruit large. Tree a free grower. Ripens January.
- CONSTANTIA BEAUTY. First rate in quality, appearance and flavour. January.
- COTE D'AZUR. A seedling from Amsden & Sneed, ripe ten days before Early Alexander; enormous well coloured fruit of best quality.
- DR. HOGG. Heavy certain cropper, large and very pretty; melting. One of the best. January. Good shipper.
- **DUCHESS OF CORNWALL.** Very early, bears well, good grower. Very pretty, best quality fruit.
- **DUKE Of YORK.** Excellent flavour and good size; highly coloured, very early. The best Export Peach for the Highveld, as it ripens in time to catch the European Christmas market.
- EARLY ALEXANDER. Large, beautiful, very juicy and melting. Ripens end of November. Good exporter.
- ELBERTA. Largest size, round, very showy, yellow flesh, melting, juicy. January to February. Especially suited for export. One of the best peaches,
- EARLY RIVERS. Large oval fruit, skin pale yellow with streaks, rich and juicy, good bearer, ripens when the earliest peaches are finished.
- EARLY CRAWFORD. Large yellow with red cheek, rich and excellent. January.
- FOSTER. Very large, yellow flesh. Ripens in February.
- GLADSTONE. Heavy regular cropper, somewhat flat, good colour and fine quality. Very late ripening.
- GREEN'S BORO. Creamish yellow with blush streaks on sunside, large to very large, of excellent quality. Ripens middle of November.
- HIGH'S EARLY CANADA. Fine coloured, second early of best flavour, large.
- INKOOS. Ripens early in November. Fruit medium sized, juicy and melting, colour whitish green marbled with green. Has been successfully exported.
- LATE CRAWFORD. Very large, roundish, yellow with dark red cheeks. Flavour rich and excellent for market and drying. February.
- LE VAINQUER. Ripe 2 to 3 weeks before Alexander, large, well coloured; freestone. A sterling variety which, being first on the market, will always command best prices. Suitable for export.

- MAY FLOWER. Very early, ripening fully 15 days before "Early Alexander," large superb carmine colour all over, excellent quality, good grower and very free bearer. Highly suitable for export. Semi-Clingstone.
- MAMIE ROSS. Flesh white, semi-cling, extra large, ripens January. Does well in warm climates.
- MARY'S CHOICE. Very late, prolific, skin yellow and flesh yellow, very juicy. Late to mid-season.
- MILLION DOLLAR PEACH. Being one-third to one-half larger than "Elbetra"; round, uniform shape; colour rich golden yellow overlaid with carmine; perfect freestone without grain or stringiness. Most delicious flavour; unusually long keeper. Ripens a week ahead of "Elberta."
- MOUNTAIN ROSE. Good flavour and colour, bears well, early mid-summer.
- MUIR. Fruit very large, flesh yellow and sweet, late, the best for drying and canning. Good for export.
- MYSTERY PEACH. A newer variety, said to be a handsome large round-fruited peach, skin and flesh yellow with rich crimson cheek.
- PEREGRINE. Mid-season, productive, fruit large and handsome, colour brilliant crimson, highly flavoured. Good exporter.
- **SALWAY.** Large, round, yellow, deep carmine cheek, buttery. Travels well, for drying, etc. Very late.
- **SEA EAGLE.** Very large and good flavour, remarkable for its brilliant colour and size. February.
- SNEED. Very early, good bearer, large, well flavoured fruit.
- WATERLOO. Very good, early peach, partial freestone. November to December. Good for export.

## Cling Stone Peaches. — D. Vaspit Perskes.

- CEYLON BLOOD. Fruit medium to large size, flesh blood red and good, excellent for canning. April.
- GEORGE'S LATE CLING. Large, white flesh, good bearer, carries well. Middle March.
- LEMON CLING. The largest Clingstone, clear yellow, fine flavoured flesh, ripening in March.
- LIMA DE DOLORES. Flesh white, blood red at stone, firm and well flavoured, skin creamy yellow, fruit very large, ripe end of February.
- RED BIRD CLING. Brilliant colour, large size fruit, flesh firm. December.
- SELLERS GOLDEN CLING. Very large, orange yeilow, salmon coloured cheek, one of the best canning sorts, late mid-season.
- VAN RENSBURG. April to May. Very late, can remain on the tree more than a month after ripening. Yellow fleshed.
- WHITE PARVIE. Large, late, an old wellknown variety.

# Sub-tropical Peaches. — Sub-tropiese Perskes.

These varieties of Peaches are all very early, and command best prices on local markets. They do invariably well in the Bushveld as well as in the coastal regions and in the Lowveld, where the European and American varieties of Peaches with few exceptions do not thrive. They are unsuitable to the South African Highveld except in very sheltered places, but do well on the tropical plains of Central Africa.

- ALEXANDER JEWEL. One of the best sub-tropical peaches, early, very heavy cropper, large fruited.
- ANGEL. Large, a good cropper, bears well in hot districts ,early flowering. December.
- **BEAUTY OF BOORRODABIN.** Ripens end of October to first week in November. The earliest peach, very heavy bearer, large uniform sized fruit, has proved its reputation.
- EDWARD VII. White flesh, a heavy cropper, good size, excellent flavour, ripe 10th of December.
- FLORIDA CRAWFORD. Fruit identical with Crawford, but suitable for much warmer districts. Ripe Christmas. Unusual heavy bearer.
- JEWEL. Medium to large, highly coloured, excellent quality. First week in December.
- IMPROVED WALDO. Early, medium sized fruit of best quality. Heavy bearer, ripe 10th of December.
- KILLIEKRANKIE. Good size and quality. Ripe first week in November. An extremely heavy cropper, highly flavoured.
- PALLAS. Chinese of good size, nearly round, white melting flesh, early.

#### Nectarines. — D. Gladde Perskes.

(On Peach Stock.) Plant 20 x 20 feet apart. (For Prices see Pages 2-3.)

- **EARLY RIVERS.** Largest and finest, very juicy and rich. December. Excellent exporter.
- GOLD MINE. Very large, half early, good, perfect freestone, productive, January. Very good for export.
- LEE'S SEEDLING. Largest size, beautiful coloured, rich, freestone, ripens mid-season.
- RED ROMAN'S. Very good, large, beautifully aromatic. January.
- STANWICK. Large, green in the shade, purple red where exposed to the sun, good late variety. Good shipper.
- VICTORIA. Fruit large, green skin being purplish red on sunny side, flesh white, melting and juicy. The latest of the Nectarines, ripens February.

Grootdrink, 23-11-'33.

All the trees supplied have grown splendidly, and considering our very hot climate this is an advertisement to any Nurseryman and does you credit.

#### Apricots. — D. Appelkose.

Plant 20 x 20 feet apart. (For Prices see Pages 2-3.)

- **EARLIANA.** The earliest apricot we know, ripens a week before Alpha, fruit of good size, highly coloured, tree a regular and heavy cropper, a sport seedling. One-year old trees, 2/6; two to three-year olds, 3/6 each.
- ALPHA. Medium to large, the earliest, strong grower, ripe end of November.

- BLENHEIM. Vigorous and healthy, certain cropper, large, good for canning and drying. Mid-season, suitable for export.
- EARLY NEWCASTLE. A very early medium sized apricot of fine yellow colour, prolific, bears well in the Bushveld.
- EARLY CAPE. Very early, good size and quality, good bearer, good market variety, ripe first week in December.
- MOORPARK. Where suitable it is the finest and largest apricot, beginning of January. Good for the Bushveld. Good exporter.
- OLD CAPE. Early, selected strain of the best Wellington variety, mid-season.
- ROYAL. Medium size of good quality, the best commercial variety, heavy cropper. Excellent shipper. December.
- TILTON. Midseason to late, fruit medium to large in size, well coloured, a good bearer on the highveld.

#### Almonds. — D. Amandels.

Plant 24 x 24 feet apart. For Windbreaks, plant 12 x 12 feet.

(For Prices see Pages 2-3.)

Never before has there been such a demand in the world market for Nuts of all varieties. Our South African climate is especially suitable for Almonds, adapting themselves to almost any condition of soil, bearing early and able to grow with a limited water supply.

Nuts are one of the few fruits to which hail can do comparatively little harm. Easily picked and stored, they can be disposed of any convenient time, and will find a ready market.

As a windbreak for an orchard the Almond is excellent. Fast growing, the first deciduous tree to come into leaf in Spring, one need entertain no fear of its roots being harmful to other fruit trees. While providing ample shelter, you also have the benefit of its fruit.

So that we do not hesitate in recommending the planting of Almonds, with their many advantages, as an ideal proposition for the grower who desires a quick and good return.

- Brits. The most prolific Almond to grow. A wonderful, sure and heavy cropper, very hardy, soft shell.
- \*CORNICHON. The best of the Spanish Almonds, very sweet, elongated kernel.
- I.X.L. Strong upright growers, large, soft shell nuts.
- JORDAN. The most important commercial variety with the largest and heaviest nuts.
- NONPAREIL. Heavy, regular bearer, thin shelled.
- PAPER SHELL. Very good, prolific, medium size variety with a soft shell, Good for cross polonizing the Brits.
- MISSION PRINCESS. Very productive. This variety being a late bloomer, it succeeds well in the Highveld or in other places where late frosts occur.
- NE PLUS ULTRA and HARRIOTS SEEDLING. These varieties are only suitable for warmer parts of the country.

Almonds should be planted in alternate rows of each sort as they need thorough cross fertilisation. All our Almonds are worked on Peach Stocks, and are good drought resisters and will grow on gravelly soil.

#### Walnuts. — D. Okkerneute.

Plant 30 feet apart each way,

(For Prices see Pages 2-3.)

Walnuts do best in deep soil, preferably a river bank. Once they are established they do not need any special care or artificial waterings. Remember, pruning to Walnuts is harmful to the trees and unnecessary.

OLD ENGLISH. The well known European variety.

**BAIRNSDALE.** An Australian variety of good quality. Bears young and is a strong grower.

MAMMOTH. A variety originating from the Cape nuts, of enormous size, being twice as large as the ordinary walnut. Yearlings, 2/6 each; 24/per dozen. Two-year olds, 3/6 each; 30/- per dozen.

#### Cherries. — D. Kerse.

Plant 24 x 24 feet apart.

(For Prices see Pages 2-3.)

BING. An Australian shipping variety, very fine; late, dark brown and black, large.

**BLACK EAGLE.** Very large, fleshy Cherry, almost black, flesh dark red, very sweet.

BIGARREAU NAPOLEON. Large bright red, firm; one of the best, late.

BLACK TARTARIAN. Large black, strong grower; very prolific, good market variety.

EMPEROR FRANCIS. Pale yellow, richly flushed red, very large, very early.

EARLY RIVERS. A splendid black Cherry, very early.

FROGMORE. Fruit black, very early,

GUIGNE ANNONAY. Large rich black cherry, very early.

GOVERNOR WOOD. Light red, flesh tender and delicious.

GIANT HEDELFINGER. Fruit very large, dark red, firm flesh, very sweet. Ripe beginning of December.

MAY DUKE. Abundant bearer, early and good.

MONSTREUSE DE MEZEL. Fruit good size, bright red to yellow, flesh firm, flavour sweet,

KNIGHTS EARLY BLACK. A splendid black variety, very early.

WHITE HEART. Very large luscious fruit, early and prolific bearer.

The Cherries are market favourites and always realise top prices.

# Japanese Plums. — D. Japanese Pruime.

Worked on Peach Stock, some varieties on mirobolan,

Distance to plant apart, 20 x 20 feet.

(For Prices see Pages 2-3.)

ELDORADO. One of the late L. Burbanks productions. It ripens after Santa Rosa, flesh yellow, hard and firm. Fruit large, flattish, colour when ripe dead black, delicately flavoured. A strong grower and an early bearer.

APEX. Large, round, yellow with red blush, distinct aromatic flavour. Strong grower, ripens with Methley. Fetches high prices in London and on local markets.

- ABUNDANCE. Fruit oblong, yellow and cherry-red, flesh orange yellow, heavy cropper. January.
- **BEAUTY.** Fruit of good size and quality, good for export, ripens beginning November, the earliest Plum in existence ,does well on the Highveld.

  Tree an early and regular bearer.
- BURBANK. Large, round, beautiful bright crimson. Good for export. Ripe December. Abundant bearer.
- CHALCOT. Large sized globular fruit, ripe January. Good exporter.
- FORMOSA. The largest of the early Plums. Ripens a few days before Santa Rosa. Good for export.
- GOLDEN HEART. Large golden yellow, flesh solid, sweet and free from bitterness. Mid-season,
- HALE'S EARLY. Large orange, mottled red, strong grower; ripe about 25th of November .
- HALES-GAVIOTA Mid-season, large size, beautiful appearance, regular bearer, ripens January. Forms a nicely shaped tree. Highly recommended for export.
- KELSEY. Largest and latest, heart shaped, clear yellow, carmine spotted, firm, very rich. Excellent for export and drying.
- **METHLEY.** Medium sized round fruit, rich dark red, also flesh dark red, fine texture, melting and delicious, very early. The best of the early export varities. Does not do in Transvaal Bushveld.
- OCTOBER PURPLE. Yellow flesh, skin partly coloured red, good bearer, late.
- ROYAL. Largest and finest of late Jap. Plums, deep carmine red all over.
- **SANTA ROSA.** Fruit deep purple crimson, stone small, rich flavour; ripens by the 20th December and keeps for 10 days. Abundant bearer and very good exporter. Strongly recommended, good Lowveld variety.
- SATSUMA or BLOOD. Enormous cropper, very large, blood colour; firm; for canning. January. Does well anywhere,
- SHIRO SMONO. Greengage like, yellow, fine cropper. January.
- SULTAN. Large oval shape, regular, heavy cropper, flesh blood red. Midseason.
- TAZAGINE. Medium size, rich, purple, best quality, heavy bearer; early November, somewhat shy bearer here.
- WICKSON. Beautiful fruit, deep yellow, changing to deep carmine; first quality, keeps for two weeks and is considered the best of all Japs. January. Good shipper.

#### Domestic Plums. — D. Europese Pruime.

Plant 20 feet apart.

(For Prices see Pages 2-3.)

- **DIAMOND.** Large black, flesh deep yellow, coarse grained, a good cooking plum. Heavy cropper. February.
- GREENGAGE. Greenish yellow, medium size, tender, melting and sweet. February.
- PRIDE OF ENGLAND. Medium to large, greenish yellow, very juicy. February-March.
- HAHN'S D'ALMAGNE. Large dark purple, excellent flavour, good bearer, skin dark purple. January.
- PRUNE D'AGEN. Medium size, juicy and sweet, good bearer, one of the best.
- THE CZAR. Large, blue, yellow fleshed. Early to mid-season.

#### Quinces. — D. Kwepers.

Quinces for Hedging.—Our selection of varieties, 60/- per hundred, delivered railage paid.

Plant 16 x 16 feet, and for hedging 5 feet apart. (For prices of Quinces in variety, see Pages 2-3.)

IMPROVED BORRIE. A yellow fruited variety, juicy and of good appearance, regular and heavy bearer.

ORANGE. Large round, golden yellow, excellent.

CAPE SELECTED. Grown largely in the Cape.

MEECHE'S PROLIFIC. Superior late, flesh orange yellow, fragrant,

PERSIAN. Large golden, heavy cropper.

PORTUGAL. Large, flesh yellow, juicy, fruit oblong

RAE'S MAMMOTH. Very large and productive, keeps well, early.

VAN DIEMAN. Medium to large, good bearer, oval shaped fruit.

Darabe, Transkei, 5-3-'33.

I must state, the Orange Trees I got from you are growing fast and are very healthy. They were covered with small fruit.

#### Figs. — D. Vye.

Plant 16 x 16 feet apart. For Hedges 5 feet apart. (For Prices see Pages 2-3.)

Figs for Hedging.—Our selection of varieties, £3 per hundred, delivered railage paid.

ADAM. Heavy and regular bearer. Skin brownish, flesh red, of fine texture. BRUNSWICK. A white fig of excellent quality, fruit very large pyriform.

BROWN TURKEY. Medium size, good quality and good bearer.

CAPRI. For fertilizing other varieties, where these fail to set. Capri is not edible.

CASTLE KENNEDY. Very large fig of good quality, good bearer and good market fig, fruit brown, flesh pale stained red towards centre.

DE DALMATIE. Large green, oblong fruit excellently flavoured, flesh red, very suitable for canning.

GROSSE VERTE. White fleshed, an excellent variety, extremely large.

MARQUIS LAUREROS. The largest brown fig, excellently flavoured.

MADELAINE. A fine textured medium to large fruit, excellently flavoured tree, a fine bearer.

NEGRO LARGO. Red fleshed, large size pyriform shaped fruit. Black coloured.

OLD CAPE WHITE. A good variety, flesh yellowish brown, skin pale green. Smyrna. Large pink, rich flavoured fig, of light pear green colour, needs cross fertlization with Capri.

TIGER. Large brown fruited, striped white, fine for canning, whole.

WHITE ADRIATIC. Large green, flesh red, excellent flavour, hardy, robust and prolific. One of the best, good for drying.

WHITE GENOA. Medium to large, white flesh and sweet, good bearer, skin greenish brown.

WONDERFIG. A new variety, fruit large and early ripening in November.

Tree hardy and vigorous, and a very prolific hearer. 4/6 each, in tins.

#### Citrus Trees. — D. Lemoenbome.

Plant 22 to 24 feet apart each way.

Our Citrus Trees are budded on the Cape Rough Lemon Stock and trained to a single stem. Planting time: August to March.

(For prices see prices of Fruit Trees on Pages 2-3.)

All varieties available in tins right through the season. From open ground plant July to September and December to March.

Grape Fruit.

TRIUMPH. Large fruit borne in clusters of three or four, nearly seedless. A good export variety. The best for the Transvaal.

MARSH'S SEEDLESS. Medium sized, early bearing, juicy and a good keeper.

Top prices have been obtained by export of this fruit.

POMPELMOUSE. Large fruit with loose rind. Splendid for preserving.

# Lemons. — D. Suurlemoene.

EUREKA. Nearly thornless tree, fruit of very high quality, can be recommended.

LISBON OR GENOA. Fruit long oval, thin and smooth skinned, juicy and one of the best lemons, a regular and abundant bearer, does well all over South Africa.

VILLA FRANCA. Fruit medium to large, pointed and oblong, with a thin and fragrant rind; pulp juicy and strongly acid; a few seeds; one of the finest lemons grown. Keeping well.

COMMON OR ROUGH SKIN. Old Cape variety. 1/- each; 10/- per dozen. CITRON. The rind of this variety, when cured, is known as "Citrus Rind" or "Succade".

#### Limes and Kumquats.

WEST INDIAN LIMES. Small round fruited, juicy. Full and free bearer. The favourite kind for the market.

NAGAMI KUMQUATS. The small plum shaped fruit makes delicious preserves.

### Mandarines and Naartjies.

BEAUTY OF GLEN RETREAT. Tree strong grower and productive, highly flavoured fruit which cannot be surpassed. Suitable for export.

CAPE NAARTJE OR TANGARINE. Large fruit, loose rind and sweet flesh.

Late and hangs well on tree. Excellent for local markets and export.

BOMBAY NAARTJE. Large and flat fruit of good quality, loose skinned, prolific bearer.

EMPEROR MANDARIN. The largest kind, most profitable for market growing. Loose skin, good shipper, an excellent variety.

NATAL NAARTJE. A well known variety, fruit reddish in colour.

OONSHU. Medium sized, oval shaped. Colour deeper yellow as other naartjes. Flesh tender and juicy: seedless. More frost resistant than any other variety of citrus.

AUSTRALIAN MANDARINE, Early, fruit thin skinned, rind loose. One of the best mandarines, and certainly the largest.

NATAL TIGHT SKIN. Colour deep orange yellow when ripe, well flavoured and juicy medium sized fruit, excellent shipper.

Kimberley, 19-5-'33.

The Citrus Trees I had from you a few years back have done wonders, especially the "Abundance".

# Oranges. — D. Soetlemoene.

- **ABUNDANCE.** A specially selected Transvaal Seedling Orange, the fruit has few pips, is of uniform size and thin skinned. The tree grows to a very large size, and produces fruit in abundance.
- **DU ROI.** Fruit medium to large, sometimes very large, form slightly oblate, rind thin and pulp firm and juicy, few seeds, ripening very late (November and December). Good for export.
- MEDITERRANEAN SWEET. Large, round, very juicy and sweet. Tree dwarf and thornless, most productive, successfully exported, mid-season to late.
- NAVELENCIA. Closely related to the Navel Oranges, fruit good sized, smooth and thin skinned. Tree comes into bearing the second year.
- PAPER RIND ST. MICHAEL. Thin skinned, smooth and very fine textured fruit of a pale lemon colour, ripens mid-season. Of best shipping quality.
- RUBY BLOOD. The best of the red-fleshed varieties tree strong, good bearer, ripens August to September.
- SELECTED TRANSVAAL SEEDLINGS. A selected variety of the celebrated Marico District Orange. The fruit is large and sweet and ripens in midseason. Good shipping quality.
- THOMSON'S IMPROVED NAVEL. Resembling the Washington Navel in many respects. Good flavour, thin skin and comes early into bearing.
- VALENCIA LATE. Tree a strong grower, fruit medium size, roundish-oval, pulp acid until fully ripe, colour very rich, few seeds, ripens late. Excellent for export.
- WASHINGTON NAVEL. Fruit large, solid and heavy, skin smooth and of finetexture, highly flavoured and very juicy. Early ripening. Tree bears, young. Good shipper.

#### Pecan Nuts.

Plant 30 feet apart each way,

The future Nut for South Africa. The texture of the nut is similar to a Walnut, with a more refined flavour, the shell being much thinner and softer, easily broken like that of a soft shell Almond. The tree is a fine grower and commences bearing at the age of five years. It thrives in the warmer parts of Africa and will do in sheltered situations on the Highveld.

- PECAN SEEDLING TREES. 2/6 to 3/6 each, in tins; 35/- per dozen.
- PATRICIAN PECANS. A very large fruited variety imported by us from the United States. 4/6 each in tins. (Seedlings.)
- BUDDED PECAN NUT TREES, THE FROTCHER and VAN DEMAN varieties, can be supplied in budded trees, both thin shelled varieties. At 10/6 per tree.

#### Tung Nuts.

A nut originating from Florida, where it is largely planted for the extraction of oil from its fruit, firnis and oils for waterproof paints being extracted therefrom. The tree stands a fair amount of frost and is a rampant grower with a wide spreading crown and should be planted 30—35 feet apart, each way. The nuts are not edible. Strong trees in tins, 2/6 each; smaller size, 1/6 each; 25/- and 15/- per dozen; £9 and £5 10s. per hundred.

### Guavas. — D. Koejavel.

Plant August - March. Plant 12 feet apart each way.

PRICES: In single tins, 1/3 each; 12/- per dozen; 80/- per hundred.

Larger size trees, 1/9 each; 18/- per dozen; £5 10s. per hundred.

Special quotations for quantities,

Pear Shaped. Round, white fleshed fruit, firm and aromatic.

LARGE PINK FLESH. Round, good quality, apple shaped.

RED CHINESE. More frost resisting as the other varieties; fine for jelly making. Plum shaped.

GUAVA "FIJI BEAUTY". A fine variety, producing a white fleshed firm fruit, about as large as a medium sized pear. The fruit is exceptionally fine flavoured, and the tree being hardy should thrive in sheltered Highveld positions. 2/6 each in tins.

### Persimmons. — D. Japanse Dadel-Pruime.

PRICES: Large size trees, 3/6 each; 37/6 per dozen.

Smaller sized trees, 2/6 each; 27/6 per doz.

GUIBOCHI. Oblong, red fleshed fruit, of fine flavour and texture.

KINGCOT. Large, aromatic fruit, good bearer.

NITARU. Well coloured, flat shaped fruit, keeps well, late.

OCHIROCHAKI. Dark red fleshed fruit, sugary and half melting.

OSMOND. Medium to large size, dark flesh, stores well.

TANE NASHI. Very large, roundish, bright red fleshed fruit, good bearer.

TIODEMON. Large sugary fruit, early.

TIPO. Large fruit, possessing the colour and shape of an orange.

ZENDYI. Medium sized, nearly round, flesh red and sugary.

YEDDO YISCHI. Large, oblong smooth fruit.

# Grape Vines. — D. Druiwestokke.

The following is a list of the latest introductions, which we can confidently recommend for trial planting.

Trial Collection of the seven following varieties of Grape Vines, one plant of each, 13/- for yearlings; 19/- for two-year olds. Post free.

ANGELINA. A late variety which can be fully recommended. The deliciously flavoured berries are of a blood red colour, a fine dessert variety. Yearlings 2/6 each; two year olds 3/6 each.

CHATEAU. The very attractive and large bunches are of a clear wine red colour, berries large and full about the shape of a Waltham Cross, ripening early (December). Very heavy bearer. Yearlings 2/- each; two-year olds 3/- each.

Mafeking, 26-2-'32.

The Grape Vines I had from you, are excellent. All these years they have borne splendidly, some of the bunches weighing up to 6 lbs.

- **DONCILINO DE GALAGO.** A new and very early variety, large firm bunches, berries of a deep bluish black, a fine table and market variety. Yearlings, 2/-; two-year olds, 3/- each.
- GROS NOIR DES BENI ABBES. Large showy bunches, carrying oval shaped black berries, beautifully tinged. A late export and market variety of good keeping qualities. Yearlings, 2/-; two-year olds, 3/- each.
- MARGARETHA. One of the best grapes in existence. In appearance it is blue-black and the berries are of oval shape in loose long bunches. The flavour resembles that of Muscat Hambro, but this grape is far superior in bunch and berries, and is a splendid cropper. It hangs and travels well, and is a first-class grape for the market. 2/- each; two-year olds, 3/- each.
- ROSAKI DE SMYRNA. Large oblong berries of a yellowish white colour, good size bunches firm and showy, berries contain but few seeds; can be recommended. Yearlings, 2/- each; two-year olds, 3/- each.
- RUBY REINET. Large round red berries, a new and excellent variety, introduced and recommended as a first-class table grape. Yearlings, 2/- each; two years old, 3/- each.

#### General List of the older varieties of Vines.

				Each.	Per dozen.	Per hundred.
PRICES:	Yearlings	 4.		 9d.	7/6	45/-
	Two-year olds	 	, .	 1/3	12/-	65/-
	Three-year olds	 		 2/6	25/-	

Railage prepaid per dozen and per hundred.

#### Special quotations for large quantities.

All our vines are sent out ready pruned for planting.

For varieties not listed below, please inquire, as we have several other varieties in stock. Varieties suitable for trellis are marked T.

ALMERIA. White export grape, best keeper, very late.

BARBAROSSA. T. Immense cropper, large bunches, black. Mid-season,

BARLINKA. T. Late, round black berries.

BLACK ACORN. T. Dark red berries, ripens early, an old favourite

BLACK MANUKA. A seedless variety, very large bunches, of good sized berries, early.

BLACK PRINCE. One of the best earlies, black berries, free bearer. CARNICHON. Beauty and quality are combined, the berries are of large oblong shape, the colour is purple with a beautiful bloom.

CATAWBA or STRAWBERRY GRAPE. T. Musk flavour, heavy cropper, midseason.

FLAMING TOKAY. T. Large loose bunches, red oblong berries, tough skinned. Late.

GROS COLEMAN. Jet black, immense size. A good early.

HENAB TURKEY. T. The best table variety, Large round black berries, Late.

HERMITAGE. Perfectly flavoured black grape, good bearer, mid-season.

IMPROVED PRUNE DE CAZOULS. Large black compact bunches, berries oval, flesh firm. Ripening mid-season.

KARROO BELL. T. large red. Mid-season, excellent sort.

LADIES FINGER. A fine large oblong berry, the colour is a velvet pink, good sized bunches ,good flavour

MUSCAT HAMBRO. Many consider this grape the best flavoured. The bunches are loose and ripen early. Berries very juicy.

MOLINERA GORDA. Fine large red berries, ripens fairly early, bunches loose.

RAISIN BLANC. A fine white late grape, large showy bunches.

RED CRISTAL. T. Early, beautiful clear grape, large handsome bunches.

RED HANEPOT. T. Large berries, fine flavour, late, very popular variety.

RED MUSCADEL. T. Fine flavour, on of the earliest.

SABALANSKY. Berries oval, white, slightly pinkish, mid-season.

SULTANA. Early, a seedless berry, the real raisin grape, the grape with a future.

WALTHAM CROSS. T. Large bunches and large oblong berries. Mid-season.

WHITE CRISTAL. T. Good white table grape, hangs late. Second early.

WHITE HANEPOT. T. Large and rich yellow grape. Late,

WHITE MUSCADEL. A large early and well flavoured grape, slow grower.

*Oostermoed*, 6-3-'33.

Die Druiwestokke van u gekoop, groei almal pragtig.

#### Berry Fruit. — D. Bessies.

AMERICAN BLACK BERRIES. 1/- each; 8/- per dozen.

CALIFORNIAN LOGAN BERRIES. 1/3 each; 12/- per dozen; £4 per hundred.

CHESTNUT, CORDOBA. The Spanish eatable large fruited Chestnut. 2/6 each in tins.

CUSTARD APPRE. In single tins, 2/6 each.

GRENADILLA. Large fruited. 1/6 each in tins.

Perfecta. The largest fruited variety known but rather a shy bearer. In tins, 2/6 each.

Everbearing Giant. A fine variety producing fruit abundantly, although not so large as the foregoing. 2/6 each in tins.

HAZEL NUTS. Strong well rooted plants. 2/- each; 22/- per dozen in tins.

Pomegranates. Large fruited, red, 9d. each; 6/6 per dozen; larger size plants, 1/- each; 12/- per dozen.

RASPBERRY CANES. Strong canes-

Large Red, 1/- each; 8/- per dozen; 40/- per hundred. Everbearing. 1/6 each; 15/- per dozen.

ROSE APPLES. Large fruited, the fruit or hips measuring to 3 inches in diameter, especially adapted for canning and pickling. 1/3 each; 12/per dozen.

Vereeniging, 21-11-'33.

The Strawberry Plants are thriving beautifully and I am well pleased with them.

#### Strawberries. — Aarbeie.

Prices include free delivery by post within the Union.

Planting Time March to September.

- MATHILDE. A newly imported variety, mid-season to late Fruit large, egg-shaped, colour light red, flesh rose coloured, firm and aromatic. The vigorous growth covers the fruit well and prevents it from getting sunburnt. Price, 3/6 per dozen.
- LAXTON'S SOVEREIGN. The main crop variety, large fruited and heavy bearing strain. 1/6 per dozen; 7/6 per hundred.
- STELLENBOSCH. A local cape sort, fine large aromatic fruit. 1/9 per dozen; 8/6 per hundred.
- MISSION MARVEL. Very large, red, fine flavoured berries, flesh firm, the ripe fruit carries well. 2/6 per dozen; 10/6 per hundred.
- THE MELBA. An Australian variety, large to very large, vivid red fruit, richly flavoured. 1/6 per dozen; 7/6 per hundred.

#### Miscellaneous Fruit Trees. — Diverse Vrugtebome.

- AVOCADO PEARS. Grafted Trees are available of the Fuerte and Puebla varieties. For delivery in Spring, 1934. 8/6 per tree. Established in single tins
- AVOCADO PEAR SEEDLINGS . The following varieties can be supplied. Price, established in single tins, 3/- to 5/- each.

Large Green, RUSSET.

Milka,

PEARMAIN,

BANANAS:

Ducasse Hybrids, 3/6 each in tins.

Ladies' Finger, 3/6 each in tins.

Natal, 3/6 each in tins.

- BAXTER'S GIANT LOQUAT. This variety will start to bear 3—4 years after planting, the fruit is extremely large and the tree a prolific bearer. Loquats do well in South Africa, stand the highveld climate unprotected, and the fruit being so much appreciated, they should be more generally planted. Strong seedling trees in tins, 3/- each; 30/- per dozen, f.o.r. Marico.
- LARGE FRUITED LOQUAT. A stately evergreen fruit tree, good for avenues or as a shade tree. In single tins, 1/- each; 10/- per dozen. Trees two feet high, 2/- each; 20/- per dozen.
- MANGOES. Sabre and Peach variety. In tins, 3/- to 5/- each, according to size.

MULBERRIES. Grafted plants, the Large Black or Cape and the Persian Large Black are the only two varieties which carry large plumb deep black fruit. Two-year old trees, 3/- each; 30/- per dozen. Yearlings, 2/6 each; 25/- per dozen.

Red small Fruited (morus nigra). Grown from cuttings. 1/- each; 10/- per dozen. Good for planting avenues or as shade trees, quick growing.

Silkworm Mulberry (morus alba). Unrooted cuttings, 4/- per hundred; 25/- per thousand.

MEDLARS. Giant fruited Cape, 2/6 each; in tins, 3/6 each.

PAW PAWS. Large fruited, in tins, 1/- each; 7/6 per dozen.

TRANSVAAL YELLOW PEACH SEEDLINGS. Strong trees, 9d. each; 7/6 per dozen; 50/- per hundred. Carriage paid per dozen and per hundred.

TREE TOMATO. Established in single tins, 2/6 each.

#### Rhubarb and Asparagus Roots.

Plant May to August.

NEW CRIMSON WINTER. 1/- each; 10/- per dozen. Post free.

MYATT'S VICTORIA. 9d. each; 7/6 per dozen, post free. 50/- per hundred, carriage paid.

RHUBARB SEEDLINGS. Six months old plants, 3/6 per dozen, post free.

ASPARAGUS ROOTS. One year old, 2/6 per dozen, post free.

# ROSES A FEW WORDS ON THEIR CULTURE.

Should it be found that, on arrival, the plants are not looking quite fresh owing to delay in transit, they should be immediately submerged in fresh, flowing water, or laid in a trench and covered to their full length with soil, well soaked and left to remain there for twenty-four to forty-eight hours, when they will be found to have quite revived.

Planting.—Roses grow best in sandy soil or rather stiff nature which does not contain too much vegetable matter. They do not like brackish or stagnant soils, nor do they thrive well in confined positions. As they are gross feeders, the ground may have a good quantity of manure—cow manure is the best—dug into it. Great care, however, must be taken in planting that no manure be brought in contact with the roots; this is often the cause of unsatisfactory progress, even of well-established plants; the surface, however, should always be kept loose and mulched. All grafted roses should be planted deep enough to cover union of stock and graft two or three inches with soil. This will induce the grafted-on variety to form roots as well, thus the plants become doubly rooted, stronger and more drought resistant. After pressing the soil firmly to the roots a liberal supply of water must be given, and this watering must be continued in order to keep the soil really moist during hot dry weather, a mere sprinkling of the surface will not do.

Shading.—Roses planted during warm weather August—September and January—February, are best shaded to prevent the sun drying out the growth and at the same time to keep the soil cool and moist. This is best done by placing a handful of straw, grass or suchlike over and around each plant; this can be removed as soon as the plants start sprouting. If possible, remove during a cloudy cool day. The above applies only to rose trees planted out of the open ground; roses out of tins do not need any shading.

Pruning.—In planting,, roses should be pruned very severely—all the growth reduced to one or two shoots, and these cut back so as to have only a few eyes above ground, according to variety. In planting as well as in later years, it may be observed that as a rule all weaker growing varietiesmust be cut short, in order to produce only few but strong growths. Robust growing sorts, Climbers, etc., should, in after years, be only very little cut back. Spring blooming varieties, like the Banksian, Singles, etc., should be severely pruned after having finished flowering, to encourage young growth—only old and surplus wood being removed in winter.

For Mildew.-Use Bordeaux Mixture, 2/- per tin.

Care of Standard Roses.—It should be borne in mind that Standard Roses are worked on to the wild stem immediately below the crown. By close observation, one can see the union where the buds hav been inserted. All shoots appearing below this union, and growing from the roots, are wild and should be removed occasionally, and in pruning the roses or cutting flowers therefrom, care should be taken that the buds are not broken out. Every Standard rose tree must be supported by a firm stake.

Johannesburg, 22-7-'33.

The Roses I received from you previously have done splendidly and given every satisfaction.

# NEW ROSES (1934 NOVELTIES).

- PRICE: Each 5/-. Collection of any 12 plants, 48/- for the dozen, delivered post free.
- COL. SHARMAN CRAWFORD. H.T. (A. Dickson & Sons.) Rich velvety crimson coloured blooms, reverse heavily veined and shaded deeper crimson. The vigorous growth, pronounced fragrance and exquisite form together with its rich and lasting colour will commend this excellent variety to all Rose Growers. Gold Medal N.R.S. and Award of Merit R.A.S.
- **DAVID MCKEE.** H.T. (A. Dickson & Sons.) The bud is crimson red developing to bright crimson carmine, a free and perpetual blooming variety. This Rose is of particularly good growth and graceful habit. Its delightful fragrance further enchants this fine variety.
- EVERT VAN DYK. H.T. (G. A. van Rossem.) The growth is strong and erect with disease resisting foliage. Large and full flowers of clear carmine pink colour. A splendid bedding Rose, continuous in blocm until late autum, very highly recommended. Awards: First C.ass Certificate N.R.S. Hayward Heath; Silver Gilt Medal Test Gardeos Aalsmeer; Certificate of Merit of R.H.S. Netherlands.
- GOLDEN DREAM, H.T. (W. Kordes Sons.) The new deep golden yellow rugosa hybrid, similar in growth to C. F. Meyer, which has been so highly spoken of by those who have seen it in bloom, and predict for it a good future.
- J. B. K. ROOS, H.T: (M: Leenders & Co:) The colour is pale reddish lilac shaded salmon flesh, flowers are large and full "Centifolia" scented. This is a continuous blooming variety with vigorous growth and slate green foliage.
- LORD LONSDALE. H.T. (A. Dickson & Sons.) Large, fully double, high pointed bloom with a brilliant unfading daffodil yellow colour. The flowers are very sweetly scented, free and perpetual blooming. Vigorous branching growth with disease resisting glossy green foliage. This is a startling yellow Rose of an intensity and purity not hitherto produced. Award of Merit R.S.A. and Gold Medal N.R.S:
- MADAME LOUIS LENS. H.T. (L. Lens.) The flowers are pure white, perfectly formed and continuously in bloom. Strong branching growth with healthy foliage. Gold Medal International Exhibition, Paris May 1932.
- MADGE WILDFIRE. H.T. (Dobbie & Co.) A superb Rose. The flowers are of huge size and the colour a glorious shade of sparkling Indian red, giving a rich and dazzling effect, delightfully perfumed blooms. The growth and habit is vigorous and free branching. A variety being eminently suitable for exhibition purposes. Gold Medal N.R.S. 1932.
- PEDRO VEYRAT. H.T. (P. Dot.) Vigorous free branching growth: The buds are perfectly formed, apricot yellow colour passing to pale yellow in expanded bloom, profusely flowering. Gold Medal Saverne,
- •OSWALD SIEPER. H.T. (M. Krause.) Large, full scented flowers of white colour with sulphur yellow centre. Strong bushy growth and disease resisting foliage First Prize Rellingen, 1931, First Class Certificate N.R.S. Hayward Heath 1932.

- SIMONE GUERIN. H.T. (Ch. Mallerin.) Colour of the buds dark golden yellow, Flowers carroty orange, a new colour. The blooms are large and full and carried on long rigid stems, very floriferous. Strong vigorous grower. Awards: First Class Certificate N.R.S. Haywards Heath; Gold Medal Saverne 1931; Certificate as the most beautiful French Rose, Exhibition 1932.
- CLIMBING SHOT SILK. In every detail, excepting growth, identical with the normal type. A most valuable addition to Climbing Roses and one certain to be much appreciated.

#### ROSES RECENT INTRODUCTION.

PRICES: Single plants: 3/6 each. Collection of the ten varieties one plant each, 30/- post free.

- AUREATE. H.T. (A. Dickson & Sons.) Colour bright orange cadmium, heavily shaded rosy-scarlet, developing to unfading sunflower yellow washed orange-scarlet. Long pointed bud, sweetly scented. This variety has commanded universal admiration when exhibited or when seen growing. Gold Medal N.R.S., Award of Merit R.H.S. and R.A.S:
- COMTESSE VANDAL. H.T. (M. Leenders & Co.) The colour of the long and pointed bud is reddish copper with reddish golden bronze. The inner side of the petals is salmon graduating to gold at the base, the reverse side deep coral. The developed flower attains an exceptionally large size. Awarded 4 Gold Medals and Prize of Honour at Saverne, 1930.
- GIPSY LASS. H.T. (A. Dickson & Sons.) Rich scarlet crimson colour, with blackish shading. The fine rich colour and fragrance of this variety together with its vigorous free and reliable growth make it a valuable addition to garden and decorative roses.
- HINRICH GAED. Pern. (W. Kordes Sons) Very vigorous growth with large glossy bronze green foliage. Large full flower, cup shaped with large broad petals. Capucine red with glowing orange, practically non-fading colour. A rose of undoubted merit.
- MRS. T. B. DOXFORD. H.T. (A. Dickson & Sons.) The reverse of the bud and young flower is old rose, heavily marked strawberry red; inside salmon carmine with yellow base, evolving to a beautiful peach blossom shading, sweetly scented. A distinct and lovely rose, which must by merit become one of the most popular. Awarded Certificate of Merit N.R.S.
- OTTO KRAUSE. H.T. (C. Weigand.) The flower is large, full and perfectly formed, with a coppery yellow colour. Vigorous branching growth and very free and continuous blooming. A rose of great beauty and meritator massing and cutting. Awarded Gold Medal of the V.D.R. 1931.
- RAI WENNING. H.T. (M. Leenders & Co) A vigorous and bushy grower. The flowers are glowing Cochineal carmine, full, of moderate and mild fragrance and are borne in profusion throughout the whole season. Awards: Gold Medal Saverne, Silver Medal Zeist, etc.
- REVEIL DIJONNAIS. Pernt. (E. Buatois.) Growth very vigorous, and continuous in bloom. The bud is grand, golden yellow rayed carmine, developing to a very large cup formed flower; the interior of petals is suffused cerise on dark golden yellow, the exterior yellow edged carmine. Awarded Gold Medal, Portland, and Certificate, France.

- SOUV. DE MADAME C. CHAMBARD. H.T. (C. Chambard.) Very vigorous grower. The buds are well shaped, long and carried on rigid stems, very large flower. Colour dark carmine rose, centre rosy salmon, suffused orange; novel and beautiful. Very strong Tea Rose perfume. Awarded Gold Medal Saverne, and Certificate of Merit Bagatelle.
- VIANDEN. Pernt. (Ketten Bros.) A charming combination of vivid shades, inside of petals reddish old rose and bright rosy scarlet, outside of petals clear ochre yellow and raw sienna, base of petals cadmium yellow. A very large egg shaped form, opening freely, a delightfully perfume. Awards, Gold Medal and Cup of the City Saverne.

By orders of half dozen, 6d. per plant reduction.

How to Select.—Unless you have actually seen the Rose in bloom, catalogues do not fully describe them, therefore it is much better to state colour, growth, etc., and leave the selection to us. You will generally get a better selection, as we have the experience to work on. During hot weather some varieties show a tendency to bleach their colour, thus appearing lighter than they really are, so a rose should not be condemned on its first flowering.

Please Note.—As the season advances some varieties will become sold out. We suggest that customers making their own selection should name a few supplementary varieties as substitutes in case any sort of their first selection be sold out. If no substitutes is desired, write "No Substitution" on the order, and we shall then fill the order only so far as we have plants of the varieties ordered in stock.

Booking Orders.—To prevent disappointment we advice all orders be sent to us as early in the season as possible, so that the plants can be booked and reserved for delivery at the most suitable time.

Abbreviations.—H.P., hybrid perpetual; T., tea; B., Bourbon; H.T., hybrid tea; C., China; C.L.B., climbing; P., polyantha; N., noisette; Dwf P., dwarf polyantha; W., Winchuriana; Pernt., Pernetiana.

Varieties marked "S." are available as Standards established in 4 gallon tins.

Varieties marked with an Asterisk (\*) are available as Dwarf or Bush

Roses, established in 1 gallon tins.

- WILLIAM BOWYER. (H.T.) Dark velvety red, free and good, scented.
- WILLOWMORE, (H.T.) Rich pink flowers, large, robust growth, good.
- \* W. R. SMITH. (T.) Creamy white suffused bright rosy pink, smooth petals of large size and substance, good form, vigorous grower
- S. YELLOW FRAU KARL DRUSCHKI. (H.T.) Nankeen yellow, growth and habit resembles Frau Karl Druschik.

Pretoria, 24-1-'32.

The last roses I had from you are all growing very well.

I am very pleased with them.

#### DWARF POLYANTHA ROSES.

These are most profuse and continuous bloomers, the small exquisite and double flowers being highly perfumed. They are delightful for massing in beds or as hedges, for beds of taller growing roses. The blooms are borne in clusters.

BRITANIA. A free flowering single polyantha. Colour rich crimson with white centre, yellow stamens, striking and very effective.

CATHERINE ZEIMET. Pure white, very floriferous.

DIANA. Dark orange suffused with carmine.

EBLOUISSANT. A splendid deep crimson bedder, a unique colour.

ERNA TESCHENDORF. Dark crimson. Very fine.

EUGENIE LAMESCH. Buds ochre yellow, flowers pink, highly perfumed.

S. FIREBALL. Reddish orange. When seen at a distance it looks like a flame colour. Continuously blooming.

GEORGE ELGERS. Coppery golden yellow changing to clear yellow.

S. GLORIA MUNDI. Colour glowing orange, outstanding in every way.

Awarded 4 Gold Medals.

JEANNE D'ARC. Pure milky white, beautiful.

LEONIE LAMESCH. Bright coppery red.

MAMAN N. LEVAVASEUR. Rosy crimson.

MAMAN TURBAT. Clear china rose.

MARTHA KELLER. Porcelain white, edged lilac pink.

MERVEILLES DES ROUGES. Brilliant velvety crimson.

MRS. WM. CUTHBUSH. Deep clear pink.

ORLEANS. Bright cherry red, large and full.

PERLE D'OR. Nankeen yellow orange centre, fine.

PHYLLIS. Brilliant carmine pink.

PINK DELIGHT. Fine rose pink, single, large.

RODHAETTE. Brilliant cherry red.

VERDUN. Bright carmine purple, very effective.

YVONNE RABIER. Pure white, sulphur centre.

#### CLIMBING ROSES.

The following varieties are Climbing Sports of well known Garden Roses, and also include the Noisette type, all being large flowering varieties. They are not of such rampant growth as the Rambler and Winchuriana class, and are very suitable for covering fences, pillars and verandah trellis.

- \* BEAUTY OF GLAZENWOOD. (Fortunes Yellow.) (N.) Yellow, flecked carmine, a very charming colour and very pretty bud, semi-double.
- \* BUFF MARECHAL NIEL. (N.) Yellow, tipped peach in bud form, opening with buff centre, large and very full.
- CAROLINE TESTOUT. Climbing sport of Caroline Testout.
- CHAPLIN'S CRIMSON GLOW. (Hybrid Wich.) Same habit as "Paul's Scarlet Climber". The flowers are large and full. Deep crimson with white base. A valuable acquisition. Price, 2/6 each.
- \* CLOTH OF GOLD. (N.) Large and full, of perfect shape, yellow with deep golden centre. One of the best climbers.
- \* DEVONIENSIS. (T.) Creamy white, centre blush, beautiful climber.
- FRAU K. DRUSCHKI. (H.P.) A climbing sport of Frau K. Druschik.
- GLOIRE DE DIJON. (H.T.) Climbing, buff, orange centre, large and full, a wellknown variety.
- \* GROSSHERZOG ERNST LUDWIG. (H.T.) The red Marechal Niel, very vigorous, a good climber.
- IRISH FIREFLAME. (H.T.) In all respects, excepting growth, identical with the normal type, from which it is a sport.
- K. A. VICTORIA. (H.T.) Splendid climbing sport of K. A. Victoria.
- LA FRANCE. Good climber, flowers the same as of the parent variety
- LAMARQUE. (N.) Creamy white, the parent of Marechal Niel, also called White Marechal Niel.
- LIBERTY. (H.T.) Bright velvety crimson, climbing.
- LYON ROSE. (H.T.) Colour variable shrimp pink with coral red flowers, large and fine in every respect.
- \* MARECHAL NIEL. (N.) Rich golden yellow, one of the finest roses, fragrant.
- MADAME BERARD. (T.) Salmon rose, shaded yellow, large, full and good shape, sweetly scented. Climber.
- MADAME JULES GRAVERAUX. (T.) Buff shaded, rose, very floriferous.
- MERMAID. (H.B.) Sulphur yellow, large flowering climbing rose, single.

  MRS. STEWART CLARK. (H.T.) Bright cerise pink to rose pink.
- \* NEW DAWN. The colour is a soft alabaster pink, blooms double resembling a hybrid tea, of delightful fragrance. By its perpetual blooming habit, until now unknown in Climbing Roses, this variety is sure to gain the confidence of all lovers of roses. Each 2/-; in tins, 3/- each,

\* PAUL'S SCARLET CLIMBER. Deep brilliant crimson, continously blooming.

40

- PAUL'S LEMON PILLAR. Yellow, strong growing, blooms produced singly on strong stems.
- \* REINE MARIE HENRIETTE. (H.T.) Cherry red, very striking, splendidbuds.
- ROSABEL WALKER. (H.T.) Brilliant scarlet shaded velvety crimson, flowering vigorously and freely.
- REVE d'OR. (M.) Deep yellow, vigorous. Climber.
- SOUVENIR DE MADAME VIENNOT. (T.) Large, very double flowers, yellow changing to pink. A very fine rose,
- STUDIENRAT SCHLENZ. (H.T.) Buds long, large, full flowers. Colour bright silvery rose, suffused yellow, sweetly scented.
- SUNBURST. (H T.) Superb cadmium yellow with orange centre, large cup-shaped beautiful long buds, very fine.
- SUNSTAR. (H.T.) A climbing sport of the well known and popular bedding variety.
- WHITE MAMAN COCHET, (H.T.) Extra strong climbing sport of Maman Cochet.
- WILLIAM ALLAN RICHARDSON: (N.) Deep orange yellow edged with white.

#### CLIMBING ROSES (Rambler Type).

- PRICES: 1/- each; 10/- per dozen; 80/- per hundred. Post free, carriage paid, except Banksian White and Yellow at 1/6 each.
- \* AGLAIA. Bright golden yellow, rosette shaped flowers, sweetly perfumed.

- \* WHITE DOROTHY. (Winchuriana.) White sort of Dorothy Perkins, samehabit, large clusters of medium sized flowers. Very free and vigorous.

#### PALMS. — PALMPLANTE.

Palms are of the most charming and graceful plants, their stately beauty increases year by year ,as the Phoenix rises from the ashes, so a properly treated palm will show its majestic regal or drooping fans to perfection as the years go by. For decorative and ornamental effects, these plants are unexcelled; they can either be kept in tubs for indoors, or for outdoor growing. Planted as a solitaire on the lawn or set in groups in front of shrubberies, which makes them universal favourites.

- CHAMAEROPS EXCELSA. A hardy fan palm for outdoor planting or veranda decorations. Stands Highveld climate unprotected 1/6 to 7/6 each.
- COCOS PLUMOSA. A quick growing specie, will stand outdoors in sheltered spots in the Middleveld. A fine indoor variety. 2/6 to 5/6 each.
- DRACAENA INDIVISA. (CORDYLINE.) A palm like plant, very hardy, thin narrow leaves. 1/6 and 2/6 each.
- CORYPHA AUSTRALIS. A large leaved fan palm, stands the Highveld climate in protected places. As it gains height slowly and possesses large decorative fans, it makes a highly desirable variety for stoep decoration. 1/6 to 7/6 each.
- **KENTIA BELMOREANA.** A good indoor variety, tender, gracefully spread upright fans. 2/6 to 5/- each.
- **KENTIA FOSTERIANA.** Indoor variety, grows to a large and very decorative plant, leaves fan shaped. 2/6 to 5/- each.
- SEAFORTHIA ELEGANS. Its quick growth, and gracefully slender foliage make it a valuable palm for indoor uses. Tender. 2/6 to 5/- each.
- LATANIA BORBONICA. The house palm par excellence, slightly drooping fan-shaped leaves, forming a wellbuilt plant of great merit. 2/6 to 7/6 each.
- PHOENIX RECLINATA. One of the hardiest palms, stands Highveld climate. Its slender and gracefully arched foliage make it one of the most planted species. Splendid for veranda decoration. 1/6 to 7/6 each.
- PHOENIX CANARIENSIS. A hardy palm, grows to a large tree. 1/6 to 5/- each.
- PHOENIX TENUIS. Not so hardy as the former, but its fine leaved and graceful foliage makes it a good house or stoep palm. 1/6 to 3/6 each.
- WASHINGTON ROBUSTA. Fans of enormous size, measuring 3 feet and more in diameter on older plants. The deeply lacerated leaves are covered with long filaments. One of the best garden palms, also suitable for large stoeps. 1/6 to 7/6 each
  - COLLECTIONS: Sets of 3 good indoor Palms. 7/- to 15/- for the three.

    Sets of 3 Palms for large verandas, 4/6 to 20/- for 3.

    Sets of 3 Palms for outdoor, 4/6 to 20/- for the three.

State Mines, 12-3-'33.

The shrubs and Climbers arrived in very good condition. Many thanks for them.

#### ANT-KILLER UNIVERSAL.

For the destruction of White Ants, Termites, Rats and all Vermin sheltered underground. The apparatus consists of an Air Pump, Charcoal Stove and a Flexible Tube to lead the gas into the ant hoels. It is positively the most reliable ant destructor on the market. In five minutes any ant nest can be destroyed. Illustrated pamphlets on application.

Price per Machine packed on rails, £5/0/0. Poison, per tin, sufficient for 15 to 20 ant nests, 5/-.

Nylstroom, 30-6-'33.

I may state the Universal Antkiller-Pump is a real success, the ants seem to have disappeared as if by miracle.

#### VEGETABLE SEEDS.

OF THE BEST STRAINS, PURE AND RELIABLE.

#### HINTS ON SOWING AND RAISING OF SEEDS.

The Soil into which the seeds are sown should be in a perfect state of cultivation, but do not have this soil as rich in manure as the field into which the young plants are transplanted, otherwise you will find your plants later on starving.

Covering. -Very small and tiny flower seeds are best covered with a sprinkling of light pure sand or leaf mould, firmly pressed down so as to bring the seed in contact with the soil below. Larger and all vegetable seed are sown in beds and hoed in lightly with a rake.

Shading,-All seeds sown in beds, tins or boxes, must be covered and shaded from the sun. Grass matting or canvas is best suited for this purpose. The shading should gradually be lessened as the seedlings appear.

Sowing. -Do not sow too thick, or force growth too rapidly, as otherwise tne young plants grow too tall and tender and will be more easily affected and checked by adverse weather conditions.

Transplanting .- Plant and cover the young plants with earth up to the first leaves on the stem to withstand drought, and water immediately and freely afterwards.

Watering .- Seed beds and boxes should never show a dry surface crust; one good watering daily will be found sufficient to avoid this.

General.-Do not sow out all your seed of a kind at one time, for plants of different ages are naturally differently affected by adverse circumstances. Remember that with double flowering plants, such as Carnations, Petunias and others, the weakest plants generally produce afterwards the best doubles.

Calendar .- A sowing and planting Calendar for the whole year will be found at the end of this Catalogue. The months best suited for sowing will be found indicated after the name of plants or flowers.

#### Choice Collection of Vegetable Seeds. (Customer's Selection.)

Collection A, 12 packets for ..... 3/6. Collection C, 50 packets for .. .. .. 13/6.

Cash with order. Post free to any part of the Union, S.W. Africa and Portuguese East Africa.

Rykaartspos, 19-4-'32.

Die Uie-saad wat ek van U gekry het is die beste wat ek nog probeer het.

TOMATO—TAMATIES. For early fruit on the highveld make sowing in August in boxes under shelter or in a warm spot. Later sowings can be made in the open ground in beds; seed takes about 14 days to germinate, somewhat longer with early sowings on account of cooler temperature. In localities where no winter frosts occur sow in Autumn for winter fruiting. Transplant when strong enough, setting the plants 2 ft, 6 ins. apart each way. Soil to be deep and well manured. 1 oz. of seed produces about 700 to 1,000 plants.

#### FLOWER SEEDS. — BLOMSADE.

Collection of twelve packets Forest Tree Seeds, 5/- post free,

## DESCRIPTIVE LIST OF BEST KINDS WITH SUGGESTIONS FOR CULTIVATING.

ABBREVIATIONS: H., hardy; H.H., half hardy; T., tender; A., annual; B., biennial; P., perennial; Cl., climber; Thus H.H.A., half hardy annual; T.P., Tender perennial, etc. Annuals grow, flower and die the first year from seed. Biennials usually bloom the second year from seed and then die; some varieties, however, if sown early, will flower the first season. Perennials grow and bloom for many years, as a rule they start flowering the second year after sowing.

The numbers following the name of each variety indicate height of the plants and the months behind the names the most suitable for sowing.

#### COLLECTIONS OF FLOWER SEEDS.

The undermentioned collections are selected by us with due regard to the respective districts, climatic and seasonal conditions, and will be found of the utmost value. We are also prepared to make up collections chosen by our customers; any varieties priced not higher than 6d. in our list may be included.

Johannesburg, 14-8-'33.

I wish to thank you for the Chabaud Carnation Seeds which has given great satisfaction, about 95% germinated.

# French Early Flowering Chabaud Carnations.

This class of giant flowering Carnations has been very much improved during recent years, and the size of the blooms compares favourably with the best American Tree Carnations. Sowings may be made throughout the season in trays under shelter. When plants are large enough to handle, transplant into the open. Height 18 to 24 inches; plants will start flowering 4—5 months after sowing. The blooms are exquisitely scented and make excellent cut flowers.

To produce large well coloured Exhibition Blooms, water with the solution of Nitrate of Soda; one spoonful to four gallons of water.

Per	pkt.

Double finest mixed. Flowers borne in clusters, exceedingly beautiful colours. Per ¼ oz. 1/6; 4d.

P.O. North Bridge, 11-3-'33.

I am very pleased with the germination of the Sweet Pea
Seed I had from you a few weeks ago.

## SWEET PEAS.

Sow ruffled and winter flowering varieties January to May. Summer flowering varieties March to May and August to September. 1 Ounce of Seed is sufficient to plant a single row of fifty feet.

Culture .- Have trenches dug 18 inches wide and 18 inches to 2 ft. deep; place a layer of well decayed manure at the bottom of the trench 4 to 6 inches in thickness, then fill in to the ground level. Make a furrouw about three inches deep, if soil is heavy line this little furrow with a few buckets of sand, and sow the seeds about six inches apart. Cover one inch at first, as the seedlings advance keep on covering until the ground is level. The soil must be kept moist; if too dry seeds will not germinate for a long time; if too wet and the soil becomes caked they will not sproud at al.

### New Giant Springflower Ruffled Sweet Peas

The blooms of these varieties are graceful duplexed and frilled, and represent the highest achievement yet attained in Sweet Peas.

LADY RUFFLES. Large substantial exquisitely frilled and ruffled blooms. Colour a soft pink on white ground. Awarded Gold Me-
